DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-2, 4, 6-8, 27, 29 and 31-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lindstrom (US 3002119) in view of Bizoe (US 3502917).

Lindstrom discloses a dynamoelectric machine having a n annular insulating element (36) interposed between the case (12) and the winding (35), wherein the insulating element is configured as a U-shaped cross-section annular body; therefore, the insulating element's two vertical sides and a horizontal side are respectively interposed between the casing and the winding axially and radially relative to the stator axis. Lindstrom, also discloses the insulator element is interposed between the case and the winding and extended in register with an inner side face of the winding, wherein the insulator element has index portions (142) engaging with indexing portions (143) of the case for positioning the angular position of the stator relative to the insulator element. Lindstrom substantially discloses the claimed invention, except for the limitations of the insulating element has at least one duct extending through an orifice in the casing.

Application/Control Number: 09/486,790

Art Unit: 2834

Bizoe, however, teaches an insulating member has at least one duct extending through an orifice in the casing (figs 1, 3, 9). Even though Bizoe's insulating element does not have an annular body, those skilled in the art would realize that the important teaching of the Bizoe ref is to provide an insulating element with an extended duct extending through the orifice in the casing in order to not only protect the winding leads from any potential breakage or damage but also provide accessible connection between the winding leads and a power source. The test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981).

Thus, it would have been obvious to one skilled in the art at the time the invention was made to modify the Lindstrom's insulating element by embodying therewith at least one extended duct extending through an orifice in the casing, as taught by Bizoe. Doing so would not only protect the winding leads from any potential breakage or damage but also provide accessible connection between the winding leads and a power source.

Allowable Subject Matter

- 4. Claim 3, 5, 9, 13-17, 28, 30, and 33-34 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 5. Claims 21-26 are allowed.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Application/Control Number: 09/486,790

Art Unit: 2834

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Communication

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tran N Nguyen whose telephone number is (703) 308-1639. The examiner can normally be reached on M-F 6:00AM-2:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nestor Ramirez can be reached on (703)-308-1371. The fax phone numbers for the organization where this application or proceeding is assigned are (703)305-3431 for regular communications and (703)-305-3432 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)-308-1782.
